

DCI/IC 1597-75

24 June 1975

MEMORANDUM FOR: Resource Management Branch/
Operations Division/OJCS

SUBJECT : Datasets Space Use

REFERENCE : OJCS Memo, Subject as above, dated
18 June 1975, OJCS Control # 1574-75

1. Dataset DCI A0556802.Rovitoc.CIRIS was created in January of this year to consolidate CIRIS data dating from 1969, to provide a capability to store ad hoc generated working files of selected data-by subject, submission year, or geographic entity, and to permit the entry (and storage) of selected requirements and/or products information for use in testing and evaluating CIRIS requirements and products modules under development.

2. The 1100 ASP/Batch share pack requirement was determined as follows: 880 tracks for CIRIS data, CIRIS-69 through CIRIS-75 data in hand, plus CIRIS-75-77 data yet to come (CIA, [redacted] and State); 150 tracks for working files; and 70 tracks for Test and Evaluation data. Since these figures were not rigorously developed, it was felt that there was sufficient flexibility in the "rounded" total to accommodate imprecision in estimates of track requirements.

3. It would be premature to reallocate any presently unused tracks before all CIRIS-75 data has been received, verified and entered into data packs. It is therefore requested that no space be withdrawn from that presently allocated to dataset DCI A0556802.RovitoC.CIRIS.
